Energy rating and score

This property's current energy rating is D. It has the potential to be C.

[See how to improve this property's energy efficiency.](#)

The graph shows this property's current and potential energy rating.

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

For properties in England and Wales:

the average energy rating is D
the average energy score is 60

Breakdown of property's energy performance

Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property's age and type. They are used for features the assessor could not inspect.

Feature	Description	Rating
Wall	Timber frame, as built, insulated (assumed)	Good
Roof	Pitched, 270 mm loft insulation	Good
Window	Fully double glazed	Average
Main heating	Room heaters, mains gas	Average
Main heating control	No thermostatic control of room temperature	Poor
Hot water	Electric immersion, off-peak	Very poor
Lighting	Low energy lighting in 67% of fixed outlets	Good
Floor	(another dwelling below)	N/A
Secondary heating	Portable electric heaters (assumed)	N/A

Primary energy use

The primary energy use for this property per year is 245 kilowatt hours per square metre (kWh/m²).

How this affects your energy bills

An average household would need to spend **£1,056 per year on heating, hot water and lighting** in this property. These costs usually make up the majority of your energy bills.

You could **save £421 per year** if you complete the suggested steps for improving this property's energy rating.

This is **based on average costs in 2023** when this EPC was created. People living at the property may use different amounts of energy for heating, hot water and lighting.

Heating this property

Estimated energy needed in this property is:

- 1,933 kWh per year for heating
- 1,572 kWh per year for hot water

Carbon emissions

An average household produces

6 tonnes of CO₂

This property produces

1.7 tonnes of CO₂

This property's potential production

1.1 tonnes of CO₂

You could improve this property's CO₂ emissions by making the suggested changes. This will help to protect the environment.

These ratings are based on assumptions about average occupancy and energy use. People living at the property may use different amounts of energy.

Changes you could make

Step	Typical installation cost	Typical yearly saving
1. Low energy lighting	£10	£21
2. Condensing boiler	£3,000 - £7,000	£399

Help paying for energy improvements
